## SUMMARY

This revision of the Next Generation Nuclear Plant (NGNP) System Requirements Manual (SRM) contains requirements derived or taken from key source documents, which include the *Energy Policy Act of 2005* (EPAct), reports from the Nuclear Energy Research Advisory Council (NERAC) and the National Research Council of the National Academics, and previous versions of the NGNP SRM. The latter document consolidated requirements from prior reactor supplier reports and the preconceptual design report. These requirements were then categorized as high-level programmatic requirements and functional, operational, and technical requirements for the NGNP Project. This report contains the categorized programmatic and technical requirements associated with the NGNP, as well as the derived project requirements, and describes the requirements hierarchy. Project requirements are traceable to initial project baseline documents and are being designed to follow the good practices suggested in the *Systems Engineering and Interface Management* document, which states that project requirements are:

- Identified, defined, and approved as early as possible
- Documented and placed under change control
- Available to all project participants
- Refined and developed as the project progresses.

This report also provides definition of the design entity's and design authority's responsibilities for future design documents. This document presents in detail the attributes of a fully relational database (i.e., DOORS®), which contains the requirements.

As the project matures, a verification method will be selected for each requirement to ensure full implementation. Programmatic requirements are derived from the legislative directives, including the EPAct, and other regulatory requirements through the Nuclear Regulatory Commission (NRC) licensing process. The technical requirements are assigned to the applicable Plant, Areas, Systems, Subsystems, and Components (PASSCs) and include assumptions that are made during the design process. These assumptions are tagged as verified and unverified assumptions. For unverified assumptions, the project either knowingly accepts the risk of proceeding with the unverified assumption or completes the necessary tasks to validate the assumption. Changes to the requirements will be controlled in the database and formally adopted by the project via revision control.

By developing, deriving, and documenting the requirements and assumptions associated with NGNP, requirements are tracked with full accounting of each requirement to ensure customer and stakeholder needs are met. Fully implemented requirements are necessary to verify that the project has successfully met customer and stakeholder needs.

# 1. INTRODUCTION

This document constitutes the 3<sup>rd</sup> revision of the Next Generation Nuclear Plant (NGNP) System Requirements Manual (SRM) for the programmatic requirements and the Plant, Areas, Systems, Subsystems, and Components (PASSC) level requirements. The SRM defines and contains the initial requirements for the current maturity of the NGNP Project. These initial requirements are design-neutral; in other words, they remain in force regardless of the specific design decisions made in the future. Similar to a requirements allocation matrix (RAM), this SRM was prepared at the early stages of conceptual design and allocates, traces, and ensures requirements are properly met via verification methods (i.e., analysis, test, inspection, or demonstration).

As the project matures, particularly after the nuclear system design, plant operating conditions, and plant configuration are finalized, detailed design requirements for the five NGNP areas will be generated, documented, and maintained by the design entity with design authority approval. The SRM is the means of documenting programmatic and technical requirements and tracking those requirements to full implementation. The requirements are assigned to the applicable PASSCs and will include assumptions that are made during the design process. The requirements in this report represent only those requirements identified at the current state of plant design and additional requirements or modifications identified via early conceptual design work. As the requirements identification and documentation process evolves, the scope of these requirements may change. Detailed requirements will be documented in this SRM for all PASSCs as the NGNP matures.

It is the intent of the NGNP Project to meet *Energy Policy Act of 2005* (EPAct). As such, EPAct language is adopted as requirements for the project. This SRM was developed under the assumption that funding levels necessary to meet the requirements contained herein will be available, as projected by the NGNP Project.

## 1.1 Areas, Systems, Subsystems, and Components

The NGNP is comprised of five areas: Nuclear Heat Supply, Heat Transport, Hydrogen Production, Power Conversion, and Balance of Plant. Each area is broken down further into systems, which are comprised of subsystems, which are further comprised of components, as shown in Figure 1.

The requirements captured in this SRM are the high-level functional requirements as well as the operational requirements assigned to the appropriate PASSC requirements. The technical processes contained in the Requirements Management Implementation Plan (RMIP) apply to both the existing requirements contained in this SRM and the future requirements to be developed through various design phases of the project. Table 1 shows the critical PASSCs for a 750°C – 800°C reactor outlet temperature ROT; (see

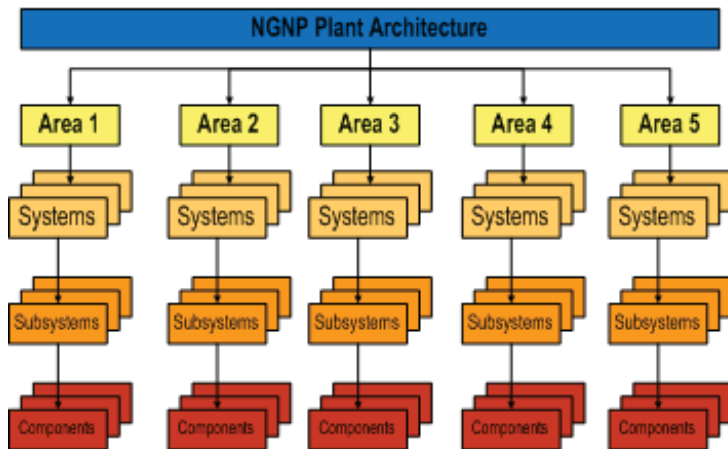

Figure 1. NGNP plant architecture.

Page: 2 of 104

INL/EXT-09-16598)<sup>1</sup> and for a 950°C ROT (see INL/EXT-08-15148)<sup>2</sup>. These critical PASSCs may change as the NGNP is further developed. The reactor suppliers have developed updates to the PASSCs to incorporate changes in reactor outlet temperatures (750°C – 800°C) and in configurations (prismatic design utilizing a steam generator in the primary loop).

<b>Hydrogen Production</b>	HTE, S-I, and HyS (currently identifying all three technologies until one is selected for NGNP)	HTE, S-I, and HyS (currently identifying all three technologies until one is selected for NGNP)
<b>Power Conversion</b>	Steam Generator	Steam Generator Power Conversion System
<b>Balance of Plant</b>	Fuel Handling System Instrumentation and Control	Fuel Handling System Instrumentation and Control

## 1.2 Requirements Hierarchy

The requirements hierarchy is based on the physical structure of the plant, and its associated areas, systems, subsystems, and components for both hydrogen production and electricity production. The lowest levels of requirements are at the plant design level. The requirements hierarchy is structured in a way that allows for further enhancement and the derivation of additional requirements without changing the original structure as the project is further defined. This SRM currently contains the NGNP's legislative and regulatory, end-user, and functional and operational requirements for the PASSC levels. Assumptions made during the design process are also captured, as verified or unverified assumptions. For unverified assumptions, the project either knowingly accepts the risk of proceeding with the unverified assumption or completes the necessary tasks to validate the assumption.

<p><b>NGNP SYSTEM REQUIREMENTS MANUAL</b></p>	<p>Identifier: INL/EXT-07-12999                  Revision: 3                  Effective Date: 09/10/09</p>	<p>Page: 3 of 104</p>
---	--	-----------------------

## 2. REQUIREMENTS DATABASE

The NGNP requirements are managed in an internationally recognized, structured database tool that aids in the development and management of requirements throughout the life cycle of any given project. The Dynamic Object Orientated Requirements System (DOORS®), produced by IBM Rational/Telelogic, was specifically designed with the ability to link and track the flow-down of requirements through a complex series of requirements modules. DOORS® has been used on large projects of similar size and complexity to the NGNP project and, as such, was selected to manage NGNP requirements. The design entities may initially implement design specification requirements in other software packages. This is acceptable provided the design requirements are received in a format approved by the design authority.

DOORS® enables its users to store data in formal modules, organize requirements in a template, relate different levels of requirements through linked modules, restrict access to the data, enter data directly into the modules, run reports, search requirements, and trace requirements through the various stages of development. Figure 2 is a sample screen of the DOORS® tool.

ID	Object #	Functional Requirements	Set	Reactor Type	Source	Source Section
124	1	<b>1 Requirements Applicable to Multiple Systems, Buildings and Structures</b>			SRM Rev 1	4.1 Requirements Applicable to Multiple Systems, Buildings and Structures
125	1.1	<b>1.1 System Configuration and Essential Features Requirements</b>			SRM Rev 1	4.1.1 System Configuration and Essential Features Requirements
126	1.1.0-1	The NGNP nuclear heat source shall use the HTGR concept.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.1 System Configuration and Essential Features Requirements
127	1.1.0-2	The NGNP nuclear heat source shall demonstrate commercial viability of the HTGR.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.1 System Configuration and Essential Features Requirements
128	1.1.0-3	The NGNP nuclear heat source shall be connected to a PCS for demonstration of high efficiency [>44%] commercial-scale electricity generation.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.1 System Configuration and Essential Features Requirements
129	1.1.0-4	The NGNP nuclear heat source shall be connected to a hydrogen production demonstration plant through an intermediate loop and intermediate heat exchanger (IHx) and deliver up to [60 MWth] of process heat.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.1 System Configuration and Essential Features Requirements
130	1.2	<b>1.2 Operational Requirements</b>			SRM Rev 1	4.1.2 Operational Requirements
131	1.2.0-1	The NGNP nuclear heat source and the PCS shall be designed and licensed as a commercial nuclear facility for generation of electricity and process heat.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.2 Operational Requirements
132	1.2.0-2	The NGNP nuclear heat source shall be designed for load following of the electricity generation plant.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.2 Operational Requirements
133	1.2.0-3	The NGNP nuclear heat source shall be designed for load following in the hydrogen production plant.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.2 Operational Requirements
134	1.2.0-4	The NGNP shall be designed to operate during loss of hydrogen production and stabilize in the electricity generation phase.	1 2	Pebble Bed Prismatic	SRM Rev 1	4.1.2 Operational Requirements

Figure 2. Sample DOORS® screen

### 2.1 Database Modules

The current requirements sets that apply to various aspects of the NGNP are contained in the Idaho National Laboratory (INL) DOORS® database, and future, more encompassing requirements will continue to be tracked and stored in the database as the NGNP project matures. The NGNP requirements stored in the DOORS® database are presented in Appendices A and B of this SRM. Figure 3 lists the modules that contain the NGNP requirements.

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999
	Revision: 3
	Effective Date: 09/10/09

### DOORS® Modules

#### Programmatic Requirements

- Regulatory
  - Top Level Design Criteria
  - Top Level Safety Criteria
  - ITAAC Validation Requirements
  - Request for Additional Information Requirements
- Legislative
- End-User Requirements
- Stakeholder Requirements

#### Functional, Operational, and Technical Requirements

- Nuclear Heat Supply Requirements
  - Reactor Pressure Vessel
  - Reactor Vessel Internals
  - Reactor Core and Core Structures
  - Nuclear Instrumentation
  - Fuel Elements
  - Reserve Shutdown Systems
  - Reactivity Control Systems
  - Core Conditioning System (Shutdown Cooling)
  - Reactor Cavity Cooling system
- Heat Transport System Requirements
  - Circulators
  - Intermediate Heat Exchangers
  - Cross Vessel Piping
  - Mixing Changer
  - High Temperature Valves
- Hydrogen Production System Requirements
  - Hydrogen Production System
- Power Conversion System Requirements
  - Steam Generator
  - Power Conversion System Equipment for Direct Combined Cycle
- Balance of Plant Requirements
  - Fuel Handling System
  - Instrumentation and Control

Figure 3. INL-controlled DOORS® modules.

## 2.2 Database Attributes

The DOORS® tool allows the user to filter requirements based on user selected attributes. From these filtered requirements, a report can be generated for a specific design. For example, one may filter a module of requirements for a prismatic reactor type with an outlet temperature of 750°C, and the tool will

**Idaho National Laboratory**

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999
	Revision: 3
	Effective Date: 09/10/09 <span style="float: right;">Page: 5 of 104</span>

output a listing of the requirements applicable to this scenario. The attributes currently contained in each of the DOORS® modules for each requirement include the following:

- ID (Created by DOORS – unique for each requirement)
- Object # (Level hierarchy of requirements)
- Requirement Text
- 950°C or 750°C
- Reactor Type (Pebble Bed or Prismatic)
- Source of Requirement.

Future attributes may include the following:

- Additional Sets for various outlet temperatures
- Subsection or type of requirement may include the following selections:
  - Performance Requirement
  - Structural or Construction Requirement
  - Environmental Requirement
  - Instrumentation and Control Requirement
  - Startup or Shutdown Requirement
  - Monitoring or Surveillance Requirement
  - In-Service Requirement
  - Availability, Maintainability, Reliability or Testability Requirement
  - Safety Requirement Codes and Standards Requirement
  - Quality Assurance Requirement
  - Decommission Requirement
  - Interface Requirement
  - Other Requirement
- Verification Method
- Verification Document
- Comment / Basis.

A sample screen of the attributes for each requirement currently in a DOORS® module is provided in Figure 4.

### 2.2.1 Reference and Alternative Designs

Due to the current development stage of the project, requirements for both the initial design and the anticipated updates are included. The initial requirements are for maximum operating temperatures of 950°C and the steam generator in the primary loop. The updated requirements reflect a plant with maximum operating temperatures between 750°C and 800°C and a steam generator in the primary loop. Each set of requirements are designated by their respective headings of 950°C or 750°C in the appropriate attribute field. In some instances, requirements apply to both scenarios and will be clearly indicated. As the project continues to mature, more alternative designs and their related requirements may be developed while other designs are retired.

### 2.2.2 Verification Methods

Each requirement will have a verification method documented in the DOORS® database. The verification method options include those listed in the International Council on Systems Engineering (INCOSE) *Systems Engineering Handbook*, v3.1<sup>3</sup>, as follows:

- *Inspection* – an examination of the item against applicable documentation to confirm compliance with requirements. Inspection is used to verify properties best determined by examination and observation (e.g., - paint color, weight, etc.).

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09 <span style="float: right;">Page: 7 of 104</span>
--	---

- *Analysis* – use of analytical data or simulations under defined conditions to show theoretical compliance. Used where testing to realistic conditions cannot be achieved or is not cost-effective. Analysis (including simulation) may be used when such means establish that the appropriate requirement, specification, or derived requirement is met by the proposed solution.
- *Demonstration* – a qualitative exhibition of functional performance, usually accomplished with no or minimal instrumentation. Demonstration (a set of test activities with system stimuli selected by the system developer) may be used to show that system or subsystem response to stimuli is suitable.
- *Test* – an action by which the operability, supportability, or performance capability of an item is verified when subjected to controlled conditions that are real or simulated. These verifications often use special test equipment or instrumentation to obtain very accurate quantitative data for analysis.

### 2.3 Allocation and Traceability

The NGNP requirements are organized in a way to show traceability to the source documents. The DOORS® tool has the capability to link requirements and visibly show the traceability flow of requirements through the graphics mode view provided by DOORS®. Many requirements currently contained in DOORS® are linked and their flows can be viewed as shown in Figure 5.

<p><b>NGNP SYSTEM REQUIREMENTS MANUAL</b></p>	<p>Identifier: INL/EXT-07-12999                  Revision: 3                  Effective Date: 09/10/09</p>	<p>Page: 8 of 104</p>
---	--	-----------------------

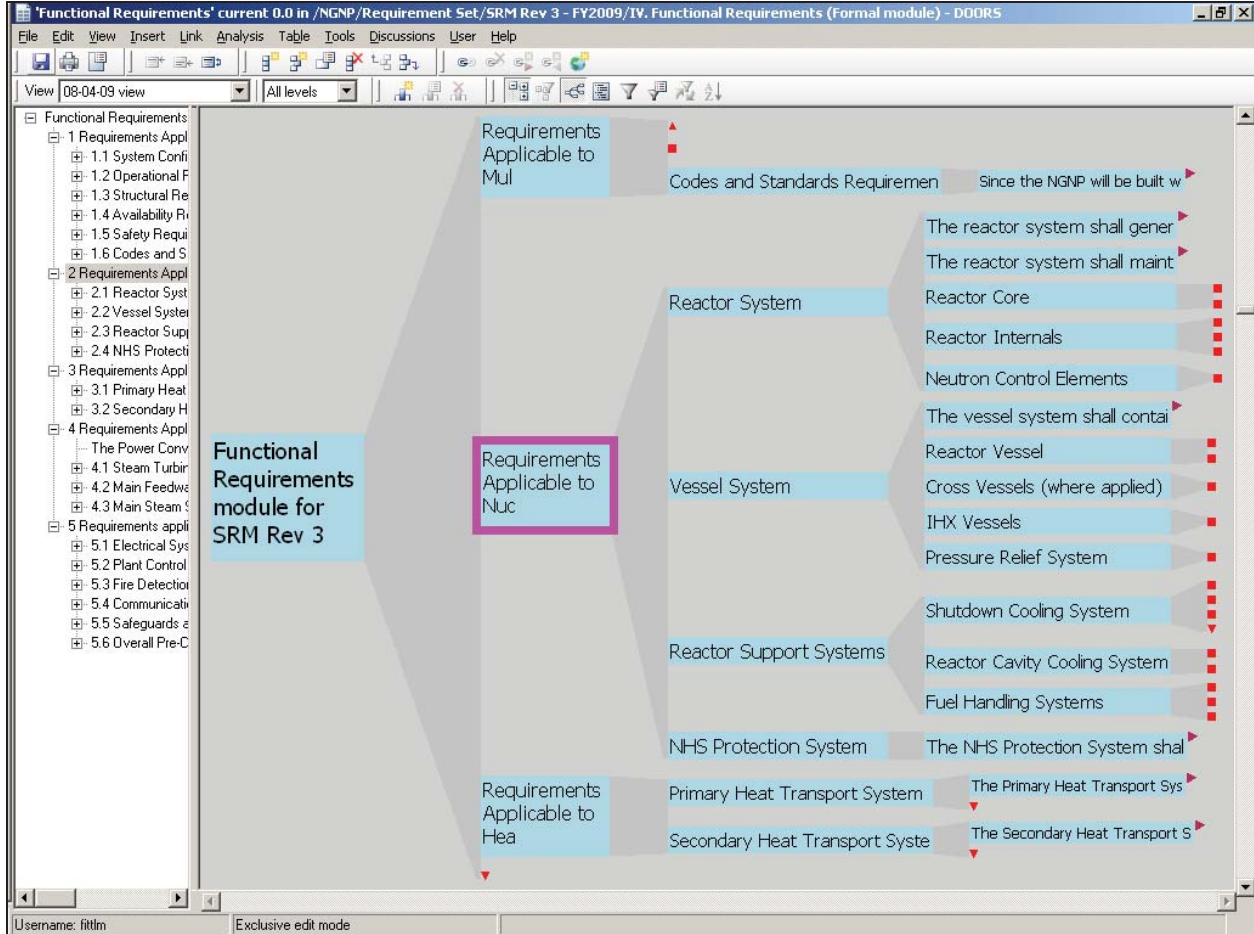

Figure 5. DOORS® Graphics Mode screen

## 2.4 Configuration Control

The design authority will maintain configuration control over the programmatic and functional, operational, and technical requirements, as shown Figure 6. The design authority is the single organization responsible for establishing and maintaining the design requirements and for ensuring that design output documents accurately reflect the design basis (DOE-STD-107-2003)<sup>4</sup>. The design entities will capture and maintain configuration control over the plant level design requirements.

<p><b>NGNP SYSTEM REQUIREMENTS MANUAL</b></p>	<p>Identifier: INL/EXT-07-12999                  Revision: 3                  Effective Date: 09/10/09</p>	<p>Page: 9 of 104</p>
---	--	-----------------------

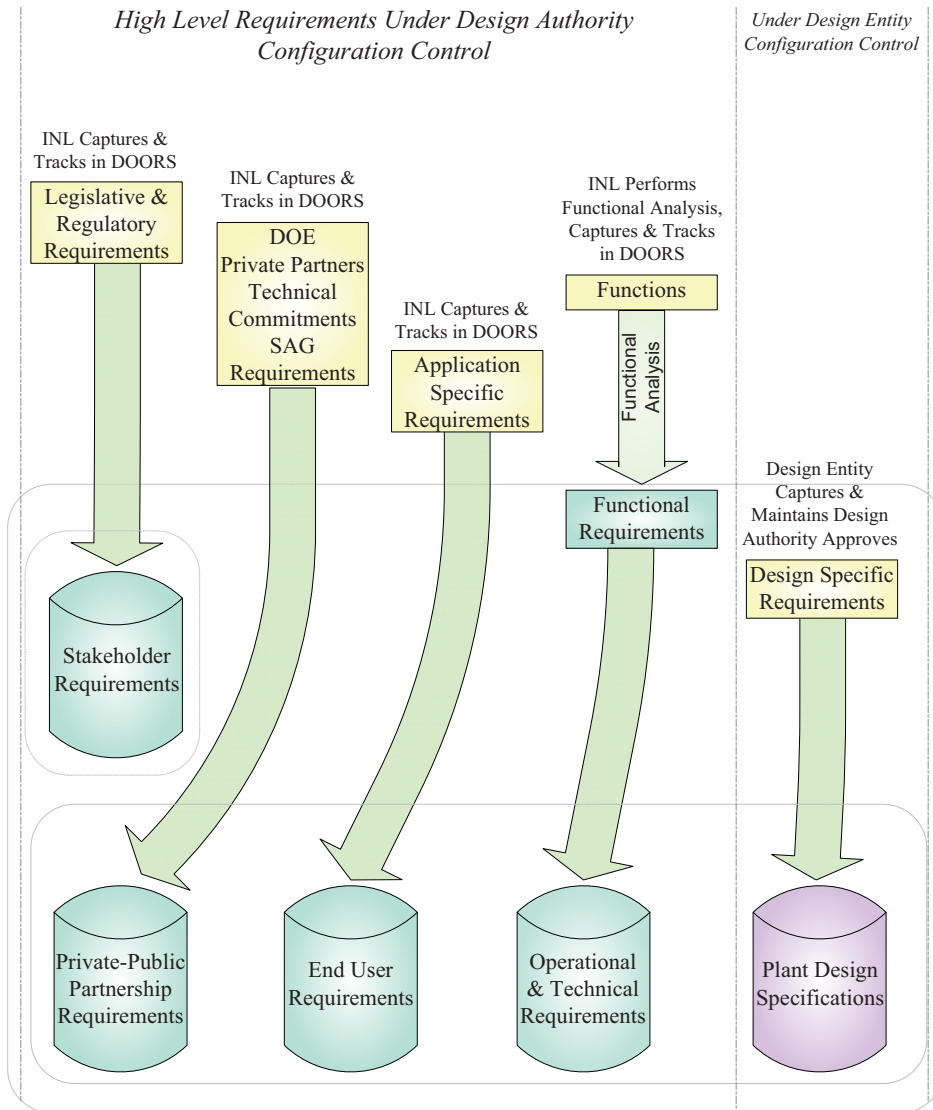

Figure 6. Requirements processing.

### 3. NGNP REQUIREMENTS

Programmatic requirements (see Appendix A) and Functional, Operational, and Technical Requirements (see Appendix B) are traceable to initial project baseline documents and follow the good practices suggested in *Systems Engineering and Interface Management*<sup>5</sup>, which states that project requirements are:

- Identified, defined, and approved as early as possible
- Documented and placed under change control
- Available to all project participants
- Refined and developed as the project progresses.

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier:	INL/EXT-07-12999
	Revision:	3
	Effective Date:	09/10/09

Page: 10 of 104

Programmatic requirements comprise regulatory (including the *Environmental Policy Act of 2005* [EPAAct 2005]<sup>6</sup>) and licensing (i.e., NRC) requirements pertinent to NGNP PASSCs, including high-level functional and location requirement. The Top Level Design Criteria, Top Level Safety Criteria, and requirements resulting from Integrated Test Analysis and Acceptance Criteria (ITAAC) Validation are also included as regulatory requirements. The ITAAC is developed and submitted with the design and the Combined Operating License Application (COLA). These requirements reflect the verification tests and analyses performed to provide evidence that the system was built as designed and performs the function intended.

Additionally, following the licensing submittals, it is anticipated that the NRC will issue Requests for Additional Information (RAIs). The RAI and any derived requirements from the responses will be tracked as requirements to ensure that each commitment is fully implemented in the design developed and systems built.

End-user requirements are specific to the intended application of NGNP. For example, an NGNP that provides process heat for an oil refinery will have different end-user requirements than an NGNP that provides electricity and hydrogen. Specific site requirements and technical direction or commitments are also included in the end-user requirements.

Per *EPAAct*, the NGNP documentation and project definition were reviewed by the independent Nuclear Energy Research Advisory Committee (NERAC), resulting in the *A Review of the NGNP Project* report, which provides additional high-level requirements. Other reports and publications by internal and external entities to the NGNP Project provided feedback into this requirements document. The publications include nationally recognized entities, such as the National Research Council of the National Academies.

Table 2 lists the cited source documents for the requirements contained herein.

## Appendix A

# NGNP Programmatic Requirements

NOTE: Items appearing in brackets ( [ ] ) represent approximations and/or undefined values.

### A-1. Regulatory Requirements

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
2		<b>Regulatory Documents</b>			SRM Rev 1	3.3 Regulatory Documents
2.1		<b>NRC/EPA Regulatory Documents</b>			SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-1	The following documents shall, as a minimum, become complied with for the NGNP Project	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-2	51 CFR 28044 - Policy Statement on Safety Goals for the Operation of Nuclear Power Plants	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-3	10 CFR 20 - Standards for Protection Against Radiation, (Permissible dose levels and activity concentrations in restricted and unrestricted areas).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-4	10 CFR 50 - Domestic Licensing of Production and Utilization Facilities (applicable portions as needed)	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-5	10 CFR 51 - Environmental Protection Regulation for Domestic Licensing and Related Regulatory Functions	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-7	10 CFR 52 - Licenses, Certifications, and Approvals for Nuclear Power Plants	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents
	2.1-9	10 CFR 50, Appendix I - Numerical Guides for Design Objectives and Limiting Conditions for Operation to Meet the Criterion "as Low as is Reasonably Achievable."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.1 NRC/EPA Regulatory Documents

## Idaho National Laboratory

<b>2.3</b>		<b>FERC Regulations</b>			SRM Rev 2	3.3.3 FERC Regulations
	2.3-1	Since the NGNP is expected to produce electricity for commercial use, it shall follow applicable FERC requirements.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.3 FERC Regulations
<b>2.4</b>		<b>State of Idaho Regulations</b>			SRM Rev 2	3.3.4 State of Idaho Regulations
	2.4-2a	If the NGNP is sited at the INL, as indicated in the 2005 EPAct, the NGNP shall meet applicable state requirements and observe treaties with sovereign nations such as the Shoshone -Bannock.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.4 State of Idaho Regulations
	2.4-2b	If the NGNP is sited at the INL, as indicated in the 2005 EPAct, the NGNP shall observe treaties with sovereign nations such as the Shoshone -Bannock.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.4 State of Idaho Regulations
<b>2.5</b>		<b>Indian Reservation Rights</b>			SRM Rev 2	3.3.5 Indian Reservation Rights
	2.5-1	DOE has committed to additional interaction and exchange of information with the Shoshone-Bannock Tribes at the Fort Hall Reservation.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.3.5 Indian Reservation Rights
<b>3</b>		<b>Requirements Applicable to Multiple Systems, Buildings and Structures</b>			SRM Rev 2	4.1 Requirements Applicable to Multiple Systems, Buildings and Structures
<b>3.1</b>		<b>Environmental Requirements</b>			SRM Rev 2	4.1.4 Environmental Requirements

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 18 of 104
--	---	-----------------

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
	3.1-2	The NGNP plant shall be capable of controlling the transport of radionuclides to the end products at levels below the concentration or exposure requirements for the product (e.g., tritium in steam, gas, hydrogen). (Initial acceptable tritium levels will be set at a fraction of the U.S. Environmental Protection Agency [EPA] limits for drinking water and air.)	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	3.1-3	The NGNP and hydrogen production facilities (if applicable) shall comply with applicable requirements of the Clean Air Act/Air Programs.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.4 Environmental Requirements
	3.1-4a	The NGNP shall identify all waste streams generated in NGNP by type and estimated quantity.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.4 Environmental Requirements
	3.1-4b	The NGNP shall provide a disposition pathway within the applicable regulatory framework.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.4 Environmental Requirements
	3.1-5a	The NGNP Project shall minimize the generation of all waste, including radioactive, nonradioactive, and mixed waste.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.4 Environmental Requirements
	3.1-5b	The NGNP Project shall comply with applicable DOE orders, NRC regulations, and EPA regulations in the treatment of these wastes.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.4 Environmental Requirements
<b>3.2</b>		<b>Codes and Standards Requirements</b>			SRM Rev 2	4.1.10 Codes and Standards Requirements
	3.2-1a	The design of the NGNP shall comply with all applicable federal, state, and local codes and standards.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.10 Codes and Standards Requirements
	3.2-1b	Codes and standards pertinent to the nuclear industry shall only be utilized in the design, fabrication, and installation of the structures, systems, and equipment where such codes and standards are applicable.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.10 Codes and Standards Requirements
	3.2-1c	The plant designer shall list all applicable codes and standards, and the applicable revision of each document.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.10 Codes and Standards Requirements

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 19 of 104

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
	3.2-2	NUREG/CR-5973 shall be used as a starting point for the identification of codes and standards to be followed during conceptual design.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.10 Codes and Standards Requirements
<b>3.3</b>		<b>Quality Assurance Requirements</b>			SRM Rev 2	4.1.11 Quality Assurance Requirements
	3.3-1	The NGNP project shall use the U.S. national consensus standard ASME Nuclear Quality Assurance (NQA)-1-2000, "Quality Assurance Program Requirements for Nuclear Facilities Applications."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11 Quality Assurance Requirements
<b>3.4</b>		<b>Physical Protection, Material Control and Safeguards - IAEA</b>				
	3.4-1	The NGNP shall comply with the following statement. "Designs that include considerations for safety and security requirements together in the design process such that security issues (e.g., newly identified threats of terrorist attacks) can be effectively resolved through facility design and engineered security features, and formulation of mitigation measures, with reduced reliance on human actions."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11 Physical Protection, Material Control and Safeguards - IAEA
	3.4-2	The NGNP shall comply with the following statement "Designs with features to eliminate or reduce the potential theft of nuclear materials."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11 Physical Protection, Material Control and Safeguards - IAEA
	3.4-3	The NGNP shall comply with the following statement. "Designs that emphasize passive barriers to potential theft of nuclear materials."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11 Physical Protection, Material Control and Safeguards - IAEA
	3.4-4	The NGNP shall comply with the following statement. "Finally, the NRC also believes that it will be in the interest of the public as well as the design Suppliers and the prospective license applicants to address security issues early in the design stage to achieve a more robust and effective security posture for future nuclear power reactors."	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11 Physical Protection, Material Control and Safeguards - IAEA

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 20 of 104

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
	3.4-7	The design of the NGNP shall comply with 10 CFR 73.55, Requirements for physical protection of licensed activities in nuclear power reactors against radiological sabotage.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	3.4-8	The design of the NGNP shall comply with 10 CFR 73.67, Licensee fixed site and in-transit requirements for the physical protection of special nuclear material of moderate and low strategic significance.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	3.4-9a	The design of the NGNP shall include preparation and update of a Security Assessment, "High Assurance Evaluation and Mitigative Measures Evaluation" per NUREG-800 Sections 13.6.4.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	3.4-9b	The design of the NGNP shall include the development of Physical Security Hardware Inspections, Tests, Analyses, and Acceptance Criteria (ITAAC) per NUREG-0800 Section 14.3.12.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	3.4-9c	The results of and insight from the above evaluations and the ITAAC shall be used to integrate safeguards by design into the NGNP.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	3.4-11	The NGNP design shall comply with NRC requirements for the control and accounting of special nuclear material including 10 CFR 74.19, Recordkeeping.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.2 Material Control and Accounting of Special Nuclear Material
	3.4-12	The design of the NGNP shall comply with 10 CFR 75, Safeguards on Nuclear Material-Implementation of US/IAEA Agreement.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.3 Safeguards on Nuclear Material - Implementation of US/IAEA Agreement

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 21 of 104

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
	3.4-13	The design of the NGNP shall incorporate design features to facilitate the application of international safeguards under INFCIRC/57, The Text of the Agreement for the Application of Agency Safeguards to United States Reactor Facilities, and INFCIRC/540, Model Protocol Additional to the Agreements(s) Between State(s) and the International Atomic Energy Agency for the Application of Safeguards.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.1.3 Safeguards on Nuclear Material - Implementation of US/IAEA Agreement
<b>4</b>		<b>Public and Worker Exposure Limits</b>			Bounding Condition	4.5 Public and Worker Exposure Limits
<b>4.1</b>		<b>Protection Criteria for the Worker and the Public</b>				
	4.1-1	Upper bound offsite doses during design basis events shall meet 10 CFR 50.34 with margin.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
	4.1-2a	There shall be a technical basis for eliminating or minimizing the need for offsite emergency planning.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
	4.1-2b	This technical basis (for eliminating or minimizing the need for offsite emergency planning) shall consider a risk-informed, realistic assessment of design basis and beyond design basis accidents and shall demonstrate high confidence that the EPA Protection Action Guidelines are met.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
	4.1-2c	The NGNP design shall effectively demonstrate that off-site emergency plan requirements may be minimized (e.g., eliminate requirements for emergency drills, sirens, etc.).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
	4.1-3	Exposure to the Worker and the Public under normal operation shall meet 10 CFR 20 and ALARA (as low as reasonably achievable) as quantified in Appendix I of 10 CFR 50.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
<b>4.2</b>		<b>Bounding Condition - 005</b>			Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-1	Fuel specifications, operating conditions, and plant shielding shall be sufficient to meet NRC and Environmental Protection Agency (EPA) exposure limits for the public and workers under normal operation and calculated accident conditions. These limits are as follows:	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999
	Revision: 3
	Effective Date: 09/10/09
	Page: 22 of 104

Object #	Requirement ID	Requirements Statements	Set	Reactor Type	Source	Source Section
	4.2-2	Under accident conditions, the release rates shall be limited to meet the EPA Protective Action Guidelines limits and 10% of the 10 CFR 100 limit at the exclusion area boundary (EAB; 400+ meters).	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-3	Exposure to the public under normal plant operation shall not exceed 0.1 rem in a year, exclusive of the dose contributions from background radiation.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-4	The occupational dose to individual adults shall be limited on an annual basis to 10% of the 10 CFR 20 limits.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-5	Tritium concentration control shall be sufficient to meet activity limits in the products of the plant.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-6a	Tritium concentrations in products shall not exceed 100 Bq/liter (~10% of the EPA limit for drinking water, 740 Bq/liter).	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-6b	Tritium concentrations in liquid effluents shall not exceed 100 Bq/liter (~10% of the EPA limit for drinking water, 740 Bq/liter).	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
	4.2-7	Tritium concentrations in gaseous effluents and products shall not exceed 3.7 Bq/liter (the NRC limit for air).	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.1 Bounding Condition - 005
<b>4.3</b>		<b>Bounding Condition - 006</b>			Bounding Condition	4.5.2 Bounding Condition - 006
	4.3-1	Methods shall be developed and implemented to control the concentrations of tritium sufficient to meet or exceed the activity concentration limits for the products using the HTGR technology and the NRC and EPA limits on plant gaseous and liquid effluents.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.2 Bounding Condition - 006
<b>4.4</b>		<b>Bounding Condition - 007</b>			Bounding Condition	4.5.3 Bounding Condition - 007
	4.4-1a	Characterization of dust circulation in the primary system shall be required to ensure acceptable levels of dust-borne activity in the system.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.3 Bounding Condition - 007
	4.4-1b	Control of dust circulation in the primary system shall be required to ensure acceptable levels of dust-borne activity in the system.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.5.3 Bounding Condition - 007

## Idaho National Laboratory

	3.1.2-1-1	(1) IN GENERAL- The Project shall be managed in the Department by the Office of Nuclear Energy, Science, and Technology.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-1-2	(2) GENERATION IV NUCLEAR ENERGY SYSTEMS PROGRAM- The Secretary may combine the Project with the Generation IV Nuclear Energy Systems Initiative.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-1-3	(3) EXISTING DOE PROJECT MANAGEMENT EXPERTISE- The Secretary may utilize capabilities for review of construction projects for advanced scientific facilities within the Office of Science to track the progress of the Project.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-1	(1) LEAD LABORATORY - The Idaho National Laboratory shall be the lead National Laboratory for the Project and shall collaborate with other National Laboratories, institutions of higher education, other research institutes, industrial researchers, and international researchers to carry out the Project.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-2	(2) INDUSTRIAL PARTNERSHIPS-	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-2-1	(A) IN GENERAL- The Idaho National Laboratory shall organize a consortium of appropriate industrial partners that will carry out cost-shared research, development, design, and construction activities, and operate research facilities, on behalf of the Project.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-2-2	(B) COST-SHARING- Activities of industrial partners funded by the Project shall be cost-shared in accordance with section 988.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-2-3	(C) PREFERENCE- Preference in determining the final structure of the consortium or any partnerships under this subtitle shall be given to a structure (including designating as a lead industrial partner an entity incorporated in the United States) that retains United States technological leadership in the Project while maximizing cost sharing opportunities and minimizing Federal funding responsibilities.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-3	(3) PROTOTYPE PLANT SITING- The prototype nuclear reactor and associated plant shall be sited at the Idaho National Laboratory in Idaho.	950 C 750 C	Pebble Bed Prismatic	EPAct2005

	3.1.2-2-4	(4) REACTOR TEST CAPABILITIES- The Project shall use, if appropriate, reactor test capabilities at the Idaho National Laboratory.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.2-2-5	(5) OTHER LABORATORY CAPABILITIES- The Project may use, if appropriate, facilities at other National Laboratories.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
<b>3.1.3</b>		<b>SEC. 643. PROJECT ORGANIZATION.</b>			EPAct2005	
	3.1.3-1	(a) Major Project Elements- The Project shall consist of the following major program elements:	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-1-1	(1) High-temperature hydrogen production technology development and validation.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-1-2	(2) Energy conversion technology development and validation.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-1-3	(3) Nuclear fuel development, characterization, and qualification.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-1-4	(4) Materials selection, development, testing, and qualification.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-1-5	(5) Reactor and balance-of-plant design, engineering, safety analysis, and qualification.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2	(b) Project Phases- The Project shall be conducted in the following phases:	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-1	(1) FIRST PROJECT PHASE- A first project phase shall be conducted to--	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-1-1	(A) select and validate the appropriate technology under subsection (a)(1);	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-1-2	(B) carry out enabling research, development, and demonstration activities on technologies and components under paragraphs (2) through (4) of subsection (a);	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-1-3	(C) determine whether it is appropriate to combine electricity generation and hydrogen production in a single prototype nuclear reactor and plant; and	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-1-4	(D) carry out initial design activities for a prototype nuclear reactor and plant, including development of design methods and safety analytical methods and studies under subsection (a)(5).	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-2-2	(2) SECOND PROJECT PHASE- A second project phase shall be conducted to--	950 C 750 C	Pebble Bed Prismatic	EPAct2005

	3.1.3-3-2-2	(B) ASSISTANCE FROM INTERNATIONAL PARTNERS- The Secretary, through the Idaho National Laboratory, may contract for assistance from specialists or facilities from member countries of the Generation IV International Forum, the Russian Federation, or other international partners if the specialists or facilities provide access to cost-effective and relevant skills or test capabilities.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-2-3	(C) PARTNER NATIONS- The Project may involve demonstration of selected project objectives in a partner country.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-2-4	(D) GENERATION IV INTERNATIONAL FORUM- The Secretary shall ensure that international activities of the Project are coordinated with the Generation IV International Forum.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3	(3) REVIEW BY NUCLEAR ENERGY RESEARCH ADVISORY COMMITTEE-	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-1	(A) IN GENERAL- The Nuclear Energy Research Advisory Committee of the Department (referred to in this paragraph as the NERAC') shall--	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-1-1	(i) review all program plans for the Project and all progress under the Project on an ongoing basis; and	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-1-2	(ii) ensure that important scientific, technical, safety, and program management issues receive attention in the Project and by the Secretary.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-2	(B) ADDITIONAL EXPERTISE- The NERAC shall supplement the expertise of the NERAC or appoint subpanels to incorporate into the review by the NERAC the relevant sources of expertise described under paragraph (1).	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-3	(C) INITIAL REVIEW- Not later than 180 days after the date of enactment of this Act, the NERAC shall--	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-3-1	(i) review existing program plans for the Project in light of the recommendations of the document entitled Design Features and Technology Uncertainties for the Next Generation Nuclear Plant,' dated June 30, 2004; and	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.3-3-3-3-2	(ii) address any recommendations of the document not incorporated in program plans for the Project.	950 C 750 C	Pebble Bed Prismatic	EPAct2005

	Page: 29 of 104

Object #	Requirements ID	Legislative Requirements	Set	Reactor Type	Source	Source Section
	3.1.4-2-3	(3) other research or development activities that may be required on the part of the Nuclear Regulatory Commission in order to review a license application for the prototype nuclear reactor; and	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.4-2-4	(4) an estimate of the budgetary requirements associated with the licensing strategy.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.4-3	(c) Ongoing Interaction- The Secretary shall seek the active participation of the Nuclear Regulatory Commission throughout the duration of the Project to--	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.4-3-1	(1) avoid design decisions that will compromise adequate safety margins in the design of the reactor or impair the accessibility of nuclear safety-related components of the prototype reactor for inspection and maintenance;	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.4-3-2	(2) develop tools to facilitate inspection and maintenance needed for safety purposes; and	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.4-3-3	(3) develop risk-based criteria for any future commercial development of similar reactor architectures.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
<b>3.1.5</b>		<b>SEC. 645. PROJECT TIMELINES AND AUTHORIZATION OF APPROPRIATIONS.</b>			EPAct2005	
	3.1.5-1	(a) Target Date to Complete the First Project Phase- Not later than September 30, 2011, the Secretary shall--	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.5-1-1	(1) select the technology to be used by the Project for high-temperature hydrogen production and the initial design parameters for the prototype nuclear plant; or	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.5-1-2	(2) submit to Congress a report establishing an alternative date for making the selection.	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.5-2	(b) Design Competition for Second Project Phase-	950 C 750 C	Pebble Bed Prismatic	EPAct2005	
	3.1.5-2-1	The Secretary, acting through the Idaho National Laboratory, shall fund not more than 4 teams for not more than 2 years to develop detailed proposals for competitive evaluation and selection of a single proposal for a final design of the prototype nuclear reactor.	950 C 750 C	Pebble Bed Prismatic	EPAct2005

	5-1.1-5	NGNP licensing shall support potential future NRC technology neutral rule-making activities (i.e., Risk-Informed, Performance-Based Alternative to 10 CFR Part 50).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.1 NGNP Project Requirements at Pre-Conceptual Design
7		<b>"A Review of the NGNP Project"</b>			NERAC	
7.1		<b>The subcommittee recommends a series of actions to make the NGNP program as effective as possible.</b>			NERAC	Executive Summary
	7.1-1a	The current mission for the NGNP is to design and build a reactor that generates electricity and produces hydrogen. The subcommittee recommends that this dual mission shall be reconsidered and not be accepted without further analysis.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-1b	The subcommittee further recommends that this analysis be done as outlined in the following discussion.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-2	The DOE-NE staff shall conduct, with the assistance of key industry representatives, economic and engineering trade studies that consider:	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-3	The targets for hydrogen production for various scenarios over the next few decades;	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-4	The DOE target for hydrogen production via nuclear power in this overall context;	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-5	The likely hydrogen production and electricity production alternatives and how those alternatives would be factored into determining the proper mission for the NGNP.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-6	The selection of the ultimate NGNP mission can drive the reactor design in different directions. The subcommittee recommends that these trade studies be funded, initiated immediately and completed as soon as possible.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 40 of 104
--	---	-----------------

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	7.1-7	DOE shall develop the NGNP as a reactor facility that can be upgraded as the technology advances. Conceptually, the facility would be built using a smaller reactor, carefully choosing the scale to be the smallest reactor that could be reasonably extrapolated to support full size commercial applications, as a 'technology demonstrator'.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
	7.1-8	The DOE-NE staff shall update its R&D plans and develop options that can support a reactor deployment much before the 2017-2021 timeframe. EPACT requires the overall cost of the NGNP project be shared with U.S. industry as well as members of the international community. The subcommittee believes that the chances of substantial industrial contributions and international collaborations to NGNP are greatly decreased with a completion target date of 2021.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
7.2	7.1-8	These plans should enhance the ITRG perspective that to achieve a successful project even in the later time period, less aggressive project objectives must be adopted; e.g., for reactor outlet temperatures, fuel selection and performance.	950 C 750 C	Pebble Bed Prismatic	NERAC	Executive Summary
		<b>IV. NERAC Committee Review Approach</b>			NERAC	IV. NERAC Committee Review Approach
7.3		<b>V. NGNP Technology Mission</b>			NERAC	V. NGNP Technology Mission
	7.3-1	The subcommittee recommends that the NGNP dual mission shall be reconsidered and not be accepted without further analysis. There are several reasons for this conclusion:	950 C 750 C	Pebble Bed Prismatic	NERAC	V. NGNP Technology Mission
7.5		<b>VII. ITRG NGNP Recommendations</b>			NERAC	VII. ITRG NGNP Recommendations
7.6		<b>VIII. NGNP Research and Development Program Plan</b>			NERAC	VIII. NGNP Research and Development Program Plan

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999
	Revision: 3
	Effective Date: 09/10/09
	Page: 41 of 104

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	7.6-3-1	An integrated schedule shall be developed of all planned activities, similar to the computer-based scheduling program currently used by DOE staff for the Nuclear Hydrogen program. This integrated schedule and associated work breakdown structure can be used to identify a baseline R&D plan for highest priority R&D activities (and assess the impact of alternative/additional R&D tasks). Such a schedule should facilitate the adjustments that will be needed to the NGNP R&D program after its mission is selected.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-2	A series of structured workshops with industry, regulatory, laboratory, and international representatives shall be conducted to discuss the following:	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-2-1	Trade study results to select the NGNP's mission	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-2-2	Design optimization studies to meet the selected NGNP mission (e.g., plant power level, fuel configuration, fuel material, operating temperatures, structural materials)	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-2-3	R&D program elements (analysis codes and associated data needs, materials research, fuels development and certification). As noted below, steering committees may be required to ensure that appropriate parties provide continued input in some of these areas.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-2-4	Appropriate cost sharing by NGNP stakeholders (industry, international, regulatory agencies, DOE)	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 42 of 104

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	7.6-3-3	Materials R&D: The subcommittee is aware that there is also research being conducted in this area in the nuclear hydrogen program and recommends that the work for NGNP be better coordinated with that work to avoid overlap and assure the work is complementary. After trade studies are completed and an NGNP mission selected, the following items should be considered:	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-3-1	Focus on key material research needs. For example, if hydrogen production were selected as the key mission and an Intermediate Heat Exchanger (IHX) concept were included in the optimized design for that mission, the use of developmental materials should be limited to the IHX (and a systematic evaluation should be conducted to identify an appropriate material for the IHX operating conditions and develop a "code case" for the identified material). To the extent possible, the remainder of the plant should rely on conventional, proven materials.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-3-2	Graphite certification activities, which are required irrespective of the NGNP mission and reactor design, shall be reviewed and accelerated so that an appropriate material is certified within the required timeframe for deployment.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
<b>7.6-3-4</b>		<b>Design Methods</b>	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-4-1	Using results from Item 2 workshops, identify analysis tools of interest and areas where data are needed for developing, verifying and validating these codes.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-4-2	Develop a joint USNRC/industry/regulatory NGNP steering group to define required tests, needed facilities, and data to be collected (including parameter definition, accuracy, etc.). Determine data quality level and need for sequestering some data for use with "blind" predictions.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 43 of 104
--	---	-----------------

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	7.6-3-4-3	Define appropriate cost sharing required by industry, regulatory, DOE, and international organizations to complete such tests.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-5	Plant Operations - The need to potentially couple two diverse processes (electric power generation and hydrogen production) complicates the dual mission and the differing dynamic responses of the reactor plant and the hydrogen production process or the electricity production process must be carefully assessed for the single mission project. Design and analytical studies need to be performed to investigate possible configurations and control schemes. The results of these studies will provide insights as to the reactor design conditions, provision of direct versus indirect process heat cycles, etc. (The subcommittee is aware that there is also research in this area being performed under the nuclear hydrogen program, which is also managed by DOE-NE; the work for NGNP should be coordinated with that work to avoid overlap and assure the work is complementary.)	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan
	7.6-3-6	Safety and Licensing - A conversation should be begun with the NRC regarding the key aspects of safety and licensing that need to be addressed if the NGNP were deployed prior to the 2017-2021 timeframe. The subcommittee notes that the NRC staff has already begun a concerted effort for a "technology-neutral" licensing framework that the NGNP project can utilize as initial guidance (SECY-05-0130). However, this staff document has not yet been adopted by the NRC commission, but is under ongoing discussion and review by the NRC staff and ACRS.	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan

**Idaho National Laboratory**

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 44 of 104

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	7.6-3-7	<p>Fuels Development - The Subcommittee notes this is a complex subject area. The ITRG recommended that the NGNP fuel R&amp;D program focus on UO<sub>2</sub>, which has the largest experience base worldwide, instead of its current focus on UCO fuel, which is also TRISO fuel but with kernels that have a mixture of UO<sub>2</sub> and UC fuel particles. U.S. and international experts concur that UCO fuel has the potential to exhibit superior performance over the UO<sub>2</sub> kernel fuel. If UCO can be successfully developed and demonstrated, including developing and proving the needed manufacturing methods and parameters, it should allow higher burn-ups, operate at higher power densities, and release less fission products at higher accident temperatures. The use of UCO fuel is particularly important to the eventual economic success of reactors with prismatic fuel, as compared to the pebble bed fuel, since the prismatic reactor pushes the fuel harder to avoid the undesirable complexity of the pebble bed reactor's refueling scheme. Nevertheless, UCO fuel would confer performance advantages on both reactors and if it worked would likely be adopted for both.</p>	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan

**Idaho National Laboratory**

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 45 of 104

<b>Object #</b>	<b>Requirement ID</b>	<b>Stakeholder Requirements</b>	<b>Set</b>	<b>Reactor Type</b>	<b>Source</b>	<b>Source Section</b>
	7.6-3-7-1	<p>However, UCO fuel performance is not proven and requires fundamental research and development to establish that its properties are superior to UO2. In addition, R&amp;D is required to demonstrate that it is possible to manufacture fuel of the requisite quality, get it accepted by the regulator and then produce the large quantity of fuel needed to load the reactor. UO2 fuel is much further along in this process. The international community, (France, South Africa, China, Japan) have focused on first demonstrating their ability to fabricate UO2 and demonstrating that it meets the required performance. Once this is accomplished, they will consider going forward with UCO. In the near term, it appears they would be willing to cooperate with the US on work on UO2, but are less enthused about UCO cooperation because obtaining a successful and proven capability in UO2 for TRISO fuel is such a large undertaking (of the same order as the cost and of longer duration than building the capability to manufacture the reactor plant). Once UO2 can be manufactured successfully and is proven to the regulators, the international community plans to adapt their approach to UCO, which can then be loaded into existing and future reactors as desired. That is, the international community de-couples the reactor design, construction, and operation processes from the need to successfully develop UCO.</p>	950 C 750 C	Pebble Bed Prismatic	NERAC	VIII. NGNP Research and Development Program Plan

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 48 of 104
--	---	-----------------

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	10.1-5-4	For INL to accomplish its expected mission, a number of large, sophisticated and unique facilities will be needed. These could include large hot cells and associated laboratories for post-irradiation examination of materials and test reactors such as the Advanced Test Reactor (ATR). The intent is for INL to have magnet facilities attracting researchers and industrial users. For these facilities to attract users, the full costs cannot be charged, and the user would pay only the justified incremental costs associated with use. This arrangement is typical of user facilities in the Office of Science laboratories.	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
	10.1-5-5	The NE/INL budgeting system and the budget documents themselves are opaque and hard to understand. It is difficult to trace budget amounts to particular projects and programs or to specific activities within the INL sub budget. The committee concludes that a much more transparent, structured planning and budgeting process is needed.	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
	10.1-5-6	NE, ID, and INL (BEA) shall agree on a multiyear, resource-loaded, high-level schedule and plan for the INL facilities, such as the Primavera Project Planner (P3).	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
	10.1-5-7	NE, ID, and INL (BEA) shall improve the form and content of the INL facilities budget documentation. They should support a much more transparent, structured planning and budget process. Budget items should be readily traceable to specific items in the overall plan and schedule.	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
	10.1-5-8a	NE shall meet with DOE and National Nuclear Security Administration organizations that are PSOs for other laboratories to review and discuss their practices and processes.	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
	10.1-5-8b	Based on the lessons they learned, it should develop and document its own internal processes and procedures for discharging its responsibilities as the lead PSO for INL.	950 C 750 C	Pebble Bed Prismatic	NAS	Summary
<b>10.1-6</b>		<b>PROGRAM PRIORITIES, BALANCE, AND OVERSIGHT</b>			NAS	Summary

	10.2-1-1-1	The NGNP program is authorized under EPAAct05 at total funding of \$1.25 billion for Phase I, which extends to 2011. During this phase, fundamental R&D would be carried out for the associated technologies and components. This includes the reactor and its fuel, the energy conversion system, materials, and hydrogen generation technologies. In addition, certain fundamental decisions are to be made, including selection of the mission of the NGNP (efficient electricity production, process heat, hydrogen generation, or a combination of these) and the specific hydrogen generation technology. EPAAct05 also discusses Phase II, which extends from 2012 to 2021 and wherein a detailed design should be competitively developed, a license should be obtained from the U.S. Nuclear Regulatory Commission (USNRC), and the plant should be constructed and commissioned.	950 C 750 C	Pebble Bed Prismatic	NAS	3. The Generation IV and Nuclear Hydrogen Initiative Programs
	10.2-1-1-2	According to EPAAct05, the program will be based on the R&D activities of the Generation IV program, the Idaho National Laboratory (INL) will be the lead national laboratory, and the NGNP demonstration will be sited at INL. INL is charged to organize a consortium of industrial partners to cost-share the project. The NGNP project is to maximize technical exchange and transfer from other relevant sources, including other industries and international Generation IV partners.	950 C 750 C	Pebble Bed Prismatic	NAS	3. 10.2-1-2-1-5	10.2-1-2-1-5-1	<p><b>Safety and Licensing</b></p> <p>There shall be a discussion with the USNRC on the key aspects of safety and licensing that should be addressed if the NGNP is deployed in the 2017 to 2021 time frame. It is known that USNRC staff has already begun to develop a technology-neutral licensing framework that the NGNP project can use as initial guidance (SECY-05-0130). However, this staff document has not yet been adopted by the USNRC but is still being reviewed by the staff and the Advisory Committee on Reactor Safeguards. EPAAct05 requires that DOE and USNRC develop a joint approach to licensing NGNP by August 2008. This activity is currently under way with inputs from the Phase 1 NGNP program. The DOE-USNRC discussions related to NGNP licensing are focused on defining the approach that will be used. It is possible the technology-neutral approach will be used, but it is not clear if that approach would be ready in time for the engineering phase of the NGNP. In addition, the PBMR is currently in pre-application review for design certification by the USNRC. The issues being addressed are generic to HTR licensing, and this effort will provide a tangible forum in which to make progress on a licensing strategy for NGNP.</p>	950 C 750 C	Pebble Bed Prismatic	NAS NAS	3. <b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 52 of 104

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	10.2-1-3-1-1	The program is designed to develop an advanced new reactor that can provide process heat and/or electricity. The cogeneration function appears to be a complication since electricity might be generated more economically by advanced LWRs. However, no other nuclear technology can generate the high temperatures needed for the broad range of process heat applications discussed. It has been recommended by NERAC that this dual mission be reconsidered and not be accepted without further analysis. It was felt that the dual mission would drive the design, increase the cost of the program, and extend the schedule. It is important to maintain flexibility in the sizing of the NGNP reactor to facilitate obtaining the needed international collaboration or co-funding by end users. Furthermore, while a dual-purpose mission would not be necessary for future commercial plants, it could serve as an engineering-scale heat exchanger for the NGNP plant to demonstrate the viability of coupling of a nuclear plant with a hydrogen production plant.	950 C 750 C	Pebble Bed Prismatic	NAS	3. The Generation IV and Nuclear Hydrogen Initiative Programs
	10.2-1-3-4-1	The budget for NGNP currently requested by DOE is not adequate to meet the preferred schedule: To remedy this state of affairs, a significant ramp-up of roughly \$100 million per year would be required within 1 or 2 years. The budget for FY 2008 should be at least \$60 million if the program is to be launched on a trajectory that will meet the 2017 operations date. DOE's notional budget projection for the next 6 years is only about 20 percent of what is required to meet the stated schedule. The budgets for NHI are also probably not adequate if this preferred schedule is to be maintained. Finally, it is imperative that private sector funding be brought into the program to supplement the required research, development, and demonstration. The technology partners must be selected and end users must be convinced to join the public/private partnership at significant levels.	950 C 750 C	Pebble Bed Prismatic	NAS	3. The Generation IV and Nuclear Hydrogen Initiative Programs

## Idaho National Laboratory

	10.2-2-3-3	The NHI program is evaluated using the Generation IV program performance measures. For the NHI program, the economics and the safety and reliability criteria are the most important. However, specific metrics for evaluating performance have not been established. The committee recommends that the NHI program select specific economic metrics that can be linked to the cost of hydrogen produced by competing technologies, such as natural gas steam reforming. It is reasonable that until materials and fabrication methods have been identified for all of the major system components, a great deal of uncertainty will surround these evaluations. The design information will become available once decisions have been made before entering the pilot-scale demonstration phase in 2011. These decisions should be based on the potential to meet specific economic criteria.	950 C 750 C	Pebble Bed Prismatic	NAS	3. The Generation IV and Nuclear Hydrogen Initiative Programs

	3.1-3b	The NNGP non-replaceable structural materials in contact with helium shall resist erosion during plant cycle life.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System
<b>4</b>		<b>Requirements Applicable to Heat Transport System</b>			SRM Rev 2	4.4 Requirements Applicable to Heat Transport System
<b>4.1</b>		<b>Primary Heat Transport System</b>			SRM Rev 2	4.4.1 Primary Heat Transport System
<b>5</b>		<b>Reactor Type</b>			Bounding Condition	4.1 Reactor Type
<b>5.1</b>		<b>Bounding Condition - 001</b>			Bounding Condition	4.1.1 Bounding Condition - 001
<b>6</b>		<b>Reactor Design Power Level</b>			Bounding Condition	4.2 Reactor Design Power Level
<b>6.1</b>		<b>Bounding Condition - 002</b>			Bounding Condition	4.2.1 Bounding Condition - 002
	6.1-1	The NNGP shall be capable of operation at power levels up to 600 Mwt, depending on the core design, and core power densities that will demonstrate the technical and economic feasibility of commercial HTGRs with a passive safety basis such that maximum fuel temperatures under normal and abnormal conditions are acceptable.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002
	6.1-3-1	The peak time averaged fuel temperature does not exceed 1250°C under normal operating conditions.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002
	6.1-3-2	The peak fuel temperature shall not exceed 1600°C under accident conditions.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002
	6.1-4	In addition, the core design shall result in a self-consistent set of operating parameters (e.g., power density, core delta T) and material choices (e.g., fuel, graphite, core barrel, reactor vessel) that demonstrate adequate safety margin when uncertainties in operating parameters and in the associated calculation methods (typically at 95% confidence) are explicitly accounted.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999
	Revision: 3
	Effective Date: 09/10/09
	Page: 61 of 104

Object #	Requirement ID	Stakeholder Requirements	Set	Reactor Type	Source	Source Section
	6.1-5	Final design work is required to verify that the calculated fuel temperatures meet the specified ranges under all conditions after appropriately accounting for uncertainties in the calculations.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002, Summary of Bases
	6.1-6	The design of the nuclear island for the nuclear system selected for NGNP needs to be completed along with the research and development (R&D) supporting the qualification of fuel, graphite, materials, and methods required to support the licensing basis of the plant.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002, Summary of Bases
	6.1-7	Additional work is required to develop the characteristics of the nuclear system with a lower power rating (e.g., one half the maximum power design) in conjunction with an evaluation of design and any additional R&D that would be required to include or evolve certification of this lower-power design under that for the higher-power design.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002, Summary of Bases
	6.1-9	Clearly identify the lower-power design requirements in further evaluations with the private sector and through evaluation of other factors (e.g., availability of components, transportation of large vessels and components, potential for mass production, licensing)	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002, Summary of Bases
	6.1-10	The lower-power designs by the vendors shall be developed through scaling, where possible, of the current designs to meet the private sector needs	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.2.1 Bounding Condition - 002, Summary of Bases
<b>7</b>		<b>Reactor Gas Outlet Temperature</b>			Bounding Condition	4.3 Reactor Gas Outlet Temperature
<b>7.1</b>		<b>Bounding Condition - 003</b>			Bounding Condition	4.3.1 Bounding Condition - 003
	7.1-1	The reactor island shall be designed for operation at the highest temperature achievable for the reactor core design (i.e., pebble bed, the prismatic cores) and the maximum power level (see specific fuel temperature requirements above).	950 C	Pebble Bed Prismatic	Bounding Condition	4.3.1 Bounding Condition - 003
	7.1-2	NGNP shall be capable of operating at lower power and temperature to accommodate a period of plant operation below design conditions.	950 C	Pebble Bed Prismatic	Bounding Condition	4.3.1 Bounding Condition - 003
<b>8</b>		<b>Reactor Gas Inlet Temperature</b>			Bounding Condition	4.4 Reactor Gas Inlet Temperature

Object #	Requirement ID	Requirements for Reactor Pressure Vessel	Set	Reactor Type	Source	Source Section
	2.2-5	The vessel system shall be designed for design basis duty-cycle events.	950 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2 Vessel System
<b>3</b>		<b>Requirements Applicable to Nuclear Heat Source</b>			SRM Rev 2	4.3 Requirements Applicable to Nuclear Heat Source
<b>3.1</b>		<b>Vessel System</b>			SRM Rev 2	4.3.2 Vessel System
<b>3.1.1</b>		<b>Reactor Vessel</b>			SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-3	During normal operation, the reactor vessel shall maintain its operating temperature through a thermal balance between the core heat flux, core inlet helium flow, and the reactor cavity cooling system.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-4	The reactor vessel shall maintain the primary pressure boundary integrity.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-5	The operating conditions shall be considered according to the following statements:	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-5-1	In normal operation, creep effects on the reactor vessel shall be avoided (negligible creep).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-5-2	No leakage shall result from Anticipated Operating Occurrences (AOO).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
	3.1.1-5-3	For AOOs and DBAs, the reactor vessel shall not prevent restarting of the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.1 Reactor Vessel
<b>3.1.1.1</b>		<b>Vessel System</b>			SRM Rev 1	4.3.2 Vessel System
	3.1.1.1-1	The vessel system shall contain and support the components of the reactor core, reactor internal supports and structures, and the nuclear heat transport components.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.3.2 Vessel System
<b>3.1.2</b>		<b>Cross Vessels (where applied)</b>			SRM Rev 2	4.3.2.2 Cross Vessels (where applied)
	3.1.2-2	The cross vessels shall maintain the primary pressure boundary integrity.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.2 Cross Vessels (where applied)

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 68 of 104
--	---	-----------------

Object #	Requirement ID	Requirements for Reactor Pressure Vessel	Set	Reactor Type	Source	Source Section
	3.1.2-3	The cross vessels shall provide the primary heat transport path to/from the reactor vessel and IHX vessels, or steam generator vessels, as applicable.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.2 Cross Vessels (where applied)
<b>3.1.3</b>		<b>IHX Vessels (where applied)</b>			SRM Rev 2	
	3.1.3-1	The function of the IHX vessel shall be to support the IHX modules.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.3 IHX Vessels (where applied)
	3.1.3-2	The IHX vessels shall maintain the primary pressure boundary integrity.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.3 IHX Vessels (where applied)
<b>3.1.4</b>		<b>Vessel Supports</b>			SRM Rev 2	
	3.1.4-1	The IHX vessel supports shall support the vertical load.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.4 Vessel Supports
	3.1.4-2	The IHX vessel supports shall include keying for lateral support.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.4 Vessel Supports
	3.1.4-3	The IHX vessel supports shall accommodate thermal expansion.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.4 Vessel Supports
	3.1.4-4	The IHX vessel supports shall accommodate duty-cycle events.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.4 Vessel Supports
	3.1.4-5	The IHX vessel supports shall withstand coupled vibration from the circulator.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.4 Vessel Supports
	3.1.4-6	The reactor vessel shall provide core support and maintain its relative position to the control rods.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.3.2.1 Reactor Vessel
	3.1.4-7	The reactor vessel shall provide decay heat and residual heat removal by radial conduction during loss-of-forced circulation events.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.3.2.1 Reactor Vessel
<b>3.1.5</b>		<b>Pressure Relief System</b>			SRM Rev 2	
	3.1.5-2	In case of primary overpressure, the safety valves shall open to eliminate the overpressure and reclose once the overpressure condition terminates.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.2.5 Pressure Relief System
	3.1.5-3	The pressure relief system shall provide the primary coolant loop's overpressure protection as required by ASME pressure relief code.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.3.2.5 Pressure Relief System
<b>4</b>		<b>Primary System Pressure Vessels</b>			Bounding Condition	4.6 Primary System Pressure Vessels

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09
	Page: 69 of 104

Object #	Requirement ID	Requirements for Reactor Pressure Vessel	Set	Reactor Type	Source	Source Section
4.1		<b>Bounding Condition - 008</b>			Bounding Condition	4.6.1 Bounding Condition - 008
	4.1-1	The nuclear heat supply system, which includes the heat transfer/transport system, shall be designed to minimize schedule risk for the primary pressure vessels at full design power level and inlet and outlet temperatures.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.6.1 Bounding Condition - 008
	4.1-2	In this regard, the design of the primary pressure vessels, including the RPV, shall incorporate standard LWR RPV material (e.g., SA 508/533).	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.6.1 Bounding Condition - 008
	4.1-3	A parallel effort shall be continued by the NGNP Project in collaboration with the appropriate reactor vendors to develop the modified 9Cr (Grade 91) material as a viable alternative to the SA 508/533 material.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.6.1 Bounding Condition - 008
	4.1-4	If required, use of active cooling or other measures shall be identified and the design developed as necessary to meet this requirement.	950 C 750 C	Pebble Bed Prismatic	Bounding Condition	4.6.1 Bounding Condition - 008
	4.1-5	The reactor system shall be designed to provide passive residual heat removal under conditions of loss of forced cooling and loss of coolant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System
	4.1-6	The reactor system shall be designed such that the reactor core is maintained in a coolable geometry under all normal operating, abnormal operating, and postulated design basis and beyond design basis accident conditions.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System
	4.1-7	The reactor system shall be designed for an operational lifetime of 60 years (calendar). Excluding those portions of the system that can be replaced.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System
	4.1-8	The core shall use forced circulation helium as the heat transport fluid.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System
	4.1-9	Non-replaceable structural materials in contact with helium shall resist corrosion and erosion during plant life as to avoid failure and or need for replacement.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.1 Reactor System

**B-1.10 General**

Object #	Requirement ID	General Requirements	Set	Reactor Type	Source	Source Section
2		<b>Nuclear Heat Supply System - General Requirements</b>				
2.1		<b>Requirements Applicable to Nuclear Heat Supply</b>				
	2.1-1	The Nuclear Heat Supply System shall be design certified for a broad range of applications and sites. Note that the Nuclear Heat Supply System includes the nuclear island (e.g., the reactor, primary coolant system, and supporting systems) and the heat transfer/transport system.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-2	The NHSS shall be licensed independent of the application. In this regard the licensing boundary and interface requirements shall be defined for the reference configurations (e.g., transients, feed and gas return chemistry).	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-5	Applicable to broad range of cogeneration applications supplying, singly or in combination, electricity, steam, and hot gas.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-6	Reactor gas outlet temperature in the range of 750 to 800°C.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-7	Capable of completing design, licensing, construction, and startup testing for initial operation by 2021.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-8	Capable of following process load variations.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	3.2.2 HTGR Fundamental Requirements
	2.1-9	The NNGP design will be applicable to a broad range of cogeneration applications supplying, singly or in combination, electricity, steam, and hot gas.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.1 System Configuration and Essential Features Requirements
	2.1-10	For the NNGP (FOAK), the designed reactor gas outlet temperature shall be in the range of 750 to 800°C.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.1 System Configuration and Essential Features Requirements
	2.1-11	The NHSS shall be capable of controlling the transport of radionuclides to the end products at levels below the concentration or exposure requirements for the product (e.g.,	950 C 750 C	Pebble Bed Prismatic	SAG	Meeting Agreements October 22, 2008

		<b>Hydrogen Production Plant Configuration</b>				
2.2		<b>Hydrogen Production Plant Configuration</b>			SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-2	The hydrogen production plant shall be physically separated from the remainder of the NGNP consistent with commercial plant economic and risk tradeoffs.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-3	The interfaces between the hydrogen production plant and the remainder of the NGNP shall be designed to ensure that failures or upset conditions in the hydrogen production plant do not result in failures or adverse impacts to the remainder of the NGNP facility.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-4	The interfaces between the hydrogen production plant and the remainder of the NGNP shall be designed to ensure that failures or upset conditions in the NGNP facility do not result in failures or adverse impacts to the hydrogen production plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-5	The hydrogen production plant shall provide for storage of feedstock (e.g., water and makeup chemicals), as required.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-6	The hydrogen production plant shall include all necessary pretreatment or conditioning of readily available raw materials needed for the specific hydrogen process (e.g., water treatment). Hydrogen produced in the hydrogen production plant shall be made available for distribution.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-7	Hydrogen produced in the hydrogen production plant shall be made available for distribution.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-9a	No central storage shall be included at the hydrogen production plant other than buffer storage, as required for efficient operations.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-9b	Storage of hydrogen shall provide for pressure relief, venting, valving, instrumentation, and maximum allowable quantities to limit postulated conflagration.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration
	2.2-10	The oxygen by-product gas shall have purity levels consistent with current industry standards for bulk oxygen applications.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.6.2 Hydrogen Production Plant Configuration

<b>2.4-5.7</b>		<b>Communication and Lighting</b>				
	2.4-5.7-1	Communication and Lighting shall provide intra-plant communications.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.4.7 Communication and Lighting
	2.4-5.7-2	Communication and Lighting shall provide internal and external lighting.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.4.7 Communication and Lighting
<b>2.5</b>		<b>Plant Control Room System</b>				
	2.5-1	The NGNP facility design shall permit the operators to take control of the reactor and support processes from within a single integrated control room using the manual mode at any time.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.6 NHS Control Room and Operator Interface System
	2.5-2	The control room shall remain operable and capable of occupation during credible external events.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.6 NHS Control Room and Operator Interface System
	2.5-3	TBD for additional control room and operator interface requirements, such as human factors, protection in DBAs, etc.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.6 NHS Control Room and Operator Interface System
	2.5-4	The Plant Control Room System shall provide an interface between plant operators and each of the necessary systems within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.5 Plant Control Room System
<b>2.6</b>		<b>Plant Mechanical Services System</b>

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	2.6-1	TBD	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.7.6 Plant Mechanical Services System
<b>2.7</b>		<b>Fire Detection and Suppression System</b>				
	2.7-1	The Fire Detection and Suppression System shall rapidly detect and annunciate the presence and location of combustion by-products or the presence of fire within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.7 Fire Detection and Suppression System
	2.7-2	The Fire Detection and Suppression System shall control and extinguish fires that do occur.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.7 Fire Detection and Suppression System
	2.7-3	The Fire Detection and Suppression System shall provide protection for PASSCs such that the performance of safety functions are not prevented.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.7 Fire Detection and Suppression System
<b>2.8</b>		<b>Communications System</b>				
	2.8-1	The Communications System shall provide plant to off-site communications.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.8 Communications System
<b>2.9</b>		<b>Safeguards and Security System</b>				
	2.9-1	The Safeguards and Security System shall provide physical protection of the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.7.9 Safeguards and Security System
<b>2.10</b>		<b>Plant I&amp;C and Protection</b>				
	2.10-1	TBD	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.7.10 Plant I&C and Protection
<b>2.11</b>		<b>NGNP Supervisory and Control System</b>				
	2.11-1	TBD	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.7.11 NGNP Supervisory and Control System
<b>2.12</b>		<b>Site and Civil Works</b>				
	2.12-1	TBD	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.7.12 Site and Civil Works
<b>2.13</b>		<b>Structural Requirements</b>				
					SRM Rev 2	4.1.3 Structural

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 100 of 104
--	---	------------------

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	2.13-5	Can be collocated with the process; Protective Action Guidelines limits at site boundary of approximately 400 meters.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	Requirements 3.2.2 HTGR Fundamental Requirements
	2.13-6	The NGNP design will be such that the HTGR can be collocated with the process; PAG limits met at the site boundary of approximately 400 meters.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.1 System Configuration and Essential Features Requirements
	2.13-7	NGNP PASSCs shall be designed and constructed using and demonstrating modular plant construction.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.3 Structural Requirements
	2.13-8	The NGNP shall be designed for a reference safe shutdown earthquake (SSE) horizontal peak ground acceleration (PGA) of [0.3g].	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.3 Structural Requirements
	2.13-9	The NGNP shall be designed such that the minimum level at which a shutdown is required to evaluate the condition of the plant following an earthquake shall be [0.1g] PGA.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.3 Structural Requirements
	2.13-10	A seismic margin assessment shall be performed to demonstrate that there is seismic margin in the NGNP beyond the design level SSE. The seismic margin earthquake used in the seismic margin assessment process shall be the NUREG/CR-0098 median shape curve anchored to a [0.5g] PGA.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.3 Structural Requirements
	2.13-11	NGNP plant external structures, important to safety, shall be designed and constructed with consideration of aircraft impacts, as required by NRC final rule RIN 3150-A119.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.3 Structural Requirements
<b>2.14</b>		<b>Construction Requirements</b>			SRM Rev 2	4.1.12 Construction Requirements
	2.14-1	Advanced techniques, such as the use of factory or field-fabricated and assembled modules containing portions of systems and/or structures, shall be utilized (as appropriate) to reduce erection costs and schedule risks and to enhance quality control.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.12 Construction Requirements
	2.14-2	The design of buildings and equipment shall facilitate plant construction and the installation, repair, and replacement of equipment.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.12 Construction Requirements
<b>2.15</b>		<b>Safety Requirements</b>				

## Idaho National Laboratory

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 101 of 104
--	---	------------------

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	2.15-1	The nuclear system safety basis shall not depend on active cooling systems during design basis accident (DBA) conditions.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.9 Safety Requirements
<b>2.16</b>		<b>Physical Protection of Plants and Materials Requirements</b>				
	2.16-1	The design of NGNP shall possess features to eliminate or reduce the potential theft of nuclear materials.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	2.16-2	The design of NGNP shall emphasize passive barriers to potential theft of nuclear materials.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	2.16-3	The design of the NGNP shall incorporate design features intended to provide physical protection against acts of sabotage that could create a radiological hazard to the personnel or a potential radioactive release to the public and the environment.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	2.16-4	Measures that have been designed into the NGNP for safety purposes shall be taken into account, to the extent practicable; these safety features should be designed and located within the NGNP in a manner that facilitates sabotage and theft protection, including consideration of damage control/recovery actions from sabotage attempts.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	2.16-5	There shall be concurrent consideration of safety and security, which will commence at the beginning of the design process.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.1 Physical Protection of Plants and Materials
	2.16-6	The NGNP shall incorporate design features facilitating implementation of material control and accounting procedures that are sufficient to enable the NGNP operating organization to account for the special nuclear material in its possession.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.11.2 Material Control and Accounting of Special Nuclear Material
<b>2.17</b>		<b>Maintenance Requirements</b>				
	2.17-1	The NGNP design shall include provisions for monitoring equipment status, configuration, and performance and for detecting and diagnosing malfunctions as a basis for predictive maintenance plans and decision making.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.1.8 Maintenance Requirements
<b>2.18</b>		<b>NHS Protection System</b>				
	2.18-1	The NHS Protection System shall maintain plant parameters within acceptable limits established for DBAs.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.3.4 NHS Protection System

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	2.18-2	The protection system shall implement the relevant monitoring, analysis, and actuation functions necessary to reach the controlled state in case of abnormal events.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.4 NHS Protection System
	2.18-3	The protection system shall provide redundant, fail-safe protective functions.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.4 NHS Protection System
	2.18-4	The protection system shall remain operable or fail-safe during credible external events.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.4 NHS Protection System
<b>3</b>		<b>Requirements Applicable to Nuclear Heat Source</b>			SRM Rev 2	4.3 Requirements Applicable to Nuclear Heat Source
<b>3.1</b>		<b>Reactor Support Systems</b>			SRM Rev 2	4.3.3 Reactor Support Systems
<b>3.1.1</b>		<b>Helium Service System</b>			SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-1	The following is a required function of the helium service system: Remove chemical and particulate contaminants from the primary coolant to maintain specified values.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-2	The following is a required function of the helium service system: Supply purified helium to systems filled with helium.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-3	The following is a required function of the helium service system: Remove helium from the primary system and the helium-filled supporting systems and store in a gas store for purified helium.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-4	The following is a required function of the helium service system: Accept helium from helium-filled auxiliary and supporting systems during depressurization activities and, possibly, store radioactively contaminated helium.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-5	The following is a required function of the helium service system: Evacuate primary systems and helium supporting systems.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System
	3.1.1-6	The following is a required function of the helium service system: Maintain chemical contaminants within required concentration bands.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.6 Helium Service System

	Page: 103 of 104

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	3.1.1-7	The Secondary Helium Purification System shall process a small side-stream of helium from the Secondary Heat Transport System to remove chemical and radioactive impurities.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.4.2.1 Secondary Helium Purification System
	3.1.1-8	The Secondary Helium Purification System shall provide for tritium removal as required to meet tritium transport limits to plant effluents and products.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 1	4.4.2.1 Secondary Helium Purification System
<b>3.1.2</b>		<b>Radioactive Waste and Decontamination System</b>			SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-1	The Radioactive Waste and Decontamination System shall provide for collecting radioactive (or potentially radioactive) liquid and gaseous wastes, including various forms of solid waste generated within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-1	The Radioactive Waste and Decontamination System shall provide for storing radioactive (or potentially radioactive) liquid and gaseous wastes, including various forms of solid waste generated within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-1	The Radioactive Waste and Decontamination System shall provide for processing, radioactive (or potentially radioactive) liquid and gaseous wastes, including various forms of solid waste generated within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-1	The Radioactive Waste and Decontamination System shall provide for monitoring radioactive (or potentially radioactive) liquid and gaseous wastes, including various forms of solid waste generated within the plant.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-2	The Radioactive Waste and Decontamination System shall provide equipment to remove radioactive surface contamination from components, as necessary, to facilitate control and minimize migration of radioactive contamination and to limit personnel exposure to radionuclides.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System

<b>NGNP SYSTEM REQUIREMENTS MANUAL</b>	Identifier: INL/EXT-07-12999 Revision: 3 Effective Date: 09/10/09	Page: 104 of 104
--	---	------------------

Object #	Requirements ID	General Requirements for Balance of Plant	Set	Reactor Type	Source	Source Section
	3.1.2-3	The radioactive and potentially radioactive floor and equipment liquid runoff, waste streams shall be routed to the liquid radioactive waste subsystem.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	
	3.1.2-4	Provisions shall be included to reduce activity levels contained in liquid effluent.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-5	Radioactive liquid waste system components shall be redundant to provide for both system reliability and on-line maintenance.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-6	The gas waste portion of the radioactive waste system shall have sufficient storage capacity to allow for radioactive decay prior to release.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-7	Decontamination equipment shall be skid mounted. Each decontamination skid shall provide steam, wash water (including detergent and/or additives), rinse water, drying air, and vacuuming service.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-8	Decontamination system wastes shall be collected locally and routed to the appropriate radioactive waste systems.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
	3.1.2-9	All radioactive wastes generated within the facility shall be collected, monitored, treated, and processed onsite prior to shipment offsite.	950 C 750 C	Pebble Bed Prismatic	SRM Rev 2	4.3.3.7 Radioactive Waste and Decontamination System
